EQUIVALENT SPOONS

Objective: The player with the least number of letters wins.

Procedure:

1. Place the spoons in the middle. There should be one less spoon than the number of players.

2. Designate a caller

3. Pass out the cards.

4. The players try to find matching sets of four. (The percent, ratio, decimal and fraction for a value). When a player has a matching set, the player <u>quietly</u> picks up a spoon. As soon as the other players notices that a spoon is picked up they should also pick up a spoon

5. If none of the players have a set the caller calls out "pass" and all of the players pass one card to the right. Continue to pass cards as the caller calls them until a player gets a set. When a player collects a set, they grab a spoon and the other players follow.

6. The player that does not get a spoon is awarded a letter. The first letter would be an "S", then a "P" etc. spelling "spoons"

7. The cards are gathered and dealt again. Play continues until one player spells the whole word "spoons".
